Feed wedge and cutting window for grazing systems with high levels of supplementation

June 20th EGF-2018

*Theme 5–Big data and smart technologies in grassland*

M.W.J. Stiennezen, A.P. Philipsen, R.L.M. Schils en A. van den Pol-van Dasselaar
Components of Amazing Grazing

Feed supplementation

Grass intake

Grass supply

Grass growth

Soil

Cow behaviour
Amazing Grazing & Grip op Gras

- Optimise on farm fresh grass utilisation for dairy systems with
  - alternating use of grassland
  - by rotational grazing
  - cutting for fodder production
  - high levels of feed supplementation during grazing season

- Grip of Gras combines feed wedge and cutting window
  - Feed wedge to manage grazing platform
  - Cutting window to manage cutting platform
Feed wedge & Grip op Gras

- Fixed target yield and target residual
- Size grazing platform varies depending on grass growth

$X_A = 0$
$Y_A = \text{Target yield}$

$X_B = \text{Grass demand/Grass growth}$
$Y_B = \text{Target residual}$
Grazing platform & cutting window

- Move paddocks from grazing platform to cutting platform and vice versa

Change to cutting

Put back

Area available for grazing (ha)

Grass yield (kg DM ha$^{-1}$)

Field 3 (4560 kg dm/ha)

Mowing pastures
- Field 9 (put back)
- Field 10 (put back)

Not in use
- Perceel 11 (put back) (delete)
Feed wedge & expected grass growth

- Feed wedge is calculated with expected grass growth

- Expected grass growth is
  - reference for farmers
  - the average grass growth on a certain date during the growing season depending on actual yield
  - grass growth model in Dairy Wise
  - adjustable to simulate the effect on grass supply
Cutting window

- To optimise moment of cutting

Additional grass growth

Actual yield

Target yield

Target range

DM Yield (kg DM ha\(^{-1}\))

Field 9
Field 10
Field 7
Field 3
Field 1
Development & testing

- Prototype
- Developed with advisors, farmers and researchers
- Tested between April and July 2017 by 10 dairy farmers and advisors
- Half of them was familiar with estimating DM yield and the use of a feed wedge, the others were not
- Participants provided feedback weekly
- Free to use at www.akkerweb.eu
Results & discussion

- Difficult to identify farmers and advisors for test
- Experienced farmers used Grip op Gras in management
- Highly appreciated
  - Combination feed wedge and cutting window
  - Adjustable expected grass growth
- User-friendliness has to be improved
  - Input of data
- Utility and user-friendliness associated with level of experience in measuring DM yield and use feed wedge
  - More experienced farmers had fewer problems
Conclusion

- Concept of feed wedge and the cutting window was appropriate and satisfactory
- User-friendliness has to be improved
- To support the needs of a wide range of farmers with varying experience in grassland management with data, the several functionalities of Grip op Gras should become available separately
Amazing Grazing!!!

Amazing Grazing is funded by:

- ZuivelNL
- Duurzame Zuivelketen
- LTO Nederland
- NZO

Duurzame Zuivelketen is gezamenlijk initiatief van:

Partners in Amazing Grazing:

- Wageningen University & Research
- Dairy Campus
- Louis Bolk Instituut
- Kennis Transfer Centrum Zegveld

Amazing Grazing is realised in cooperation with:

- Provincie Friesland
- Feed4 Foodure
- Op naar Precisielandbouw 2.0
- Ruwvoer & Bodem
